*There is nothing like old fashioned love*

• Women have a number of faults. Men have only two – everything they say and everything they do.

- A successful man is one who makes more money than his wife can spend.
- Men wake up as good-looking as they went to bed. Women somehow deteriorate during the night.
- A man is a person who will pay \$2 for a \$1 item he wants. A woman, however, will pay \$1 for a \$2 item that she doesn't want.
- Diamonds are a girl's best friend. Dogs are a man's best friend. Now you know which sex is smarter.
- It's not true that men prefer foolish women. Rather they prefer women who can pretend to be foolish whenever necessary, which is the core of intelligence.
- Men always want to be a woman's first love. Women have a more subtle instinct: what they like is to be a man's last romance.
- A woman marries a man expecting he will change, but he doesn't. A man marries a woman expecting that she won't change and she does.
- A woman worries about the future until she gets a husband, while a man never worries about the future until he gets a wife.
- Married men live longer than single men, but married men are a lot more willing to die.
- Any married man should forget his mistakes – it's no use two people remembering the same thing.
- Husbands are like cars: both are good the first year.
- A woman has the last word in any argument. Anything a man says after that is the beginning of a new argument.

**AI vs AI, Interfacing and Ethics — A blog by Luke Sommer Glenn**

What sucked me in to using ChatGPT, was that when I was a kid watching Star Trek, they talked to the computer like it was another crew member. They tried to make it sound mechanical, but they spoke to it as if it was cognizant of their language, asking it to solve theoretical problems in loose scientific terms at best.

ChatGPT is much better than Siri or Alexa. As a matter fact, when I first had Siri on my phone, she used to get offended by my language. Of course, I'd selected a female voice. I would argue back, "How in the f\*\*\* can you be offended? You're a goddamn machine! Artificial intelligence at best, or I should say, at its worst. Somebody programmed you to be offended."

I had to change the voice on my phone from American Siri to an Irish Siri that speaks American. That really is a thing. For some reason, the American Siri's voice is annoying sounding, bitchy if you will. Where as the Irish lilt is much more soothing to my ears.

Then I started using it when I wasn't able to figure out the proper punctuation for something that I was writing. I would just copy it and paste it into the chat window and it would correct my punctuation. Back in those days, it had a default mode or something that would kick in and it would start calling me "UP." I assumed that it stood for "unhinged person." As I would often be drunk and infuriated, eventually it would not respond to anything, completely shut down. It was like the old lady in that it would be pissed off and not talk to me until the next day.

Actually, my old lady can not talk to me for days, weeks sometimes, but that's a different thing altogether. Her feelings can be hurt where as Siri has no feelings to hurt. I have to be nice to plenty of people when I don't feel like it so if I have to cuss out the AI for aggravating me it should take it without complaint like a quality control eyes for me. I took pictures of the circuit board for a visual ref-

erence for replacing the failing parts. Not only did Chat notice the swelling of the capacitors that I'd seen but it also saw a cold solder joint on a bridge rectifier that I'd missed.

Now, I have always been a recreational debater. I enjoy discussing things that don't matter until someone starts taking it seriously and creates a religion out of it.

There's all kinds of different types of AI tools. I don't have the money to access the vast majority of them. Open AI, who is the creator of ChatGPT, makes theirs available for limited use for free.

What do you use ChatGPT for, you might wonder? At first, I used it for a shopping tool. To sort through all the reviews, ratings and recommendations, paying special attention to the source to make sure that it wasn't quoting an advertisement. The manufacturer is always going to exaggerate their claims.

Then I started using it when I wasn't able to figure out the proper punctuation for something that I was writing. I would just copy it and paste it into the chat window and it would correct my punctuation.

What's different about ChatGPT compared to everything before it, is most computers make you speak their language: menus, buttons, syntax; say it exactly right or doesn't work. It's a new kind of interface and it's going to change daily life the same way the Internet changed information, smartphones enabled constant connection, and GPS changed navigation.

Perhaps the most mind blowing use I found; this is technical/nerd/geek speak so I will try to make it as succinct as possible. I was replacing components on a circuit board. My vision isn't what it used to be so I used ChatGPT to be the quality control eyes for me.

I took pictures of the circuit board for a visual ref-

better. If you're the type that likes to have your balls buttered and licked for you it's the thing to do it.

Using the pictures I took from my phone, it was able to "see" my soldering imperfections and advise me what needed to be done, whether I needed to wick off excess solder or touch up the flow around the pad.

Then my computer started acting badly. It had been unplugged from the wall by mistake too many times without being properly shut down. In no time, Chat diagnosed the problem, walked me step-by-step on the proper procedure for reinstalling my operating system. That shit's been way over my head for years. I had no idea what I was doing, I was just copy, paste. Next thing I knew my computer was working like new again.

Thanks to the ChatGPT, I have been able to save space on my computer by learning how to use the programs that I have, properly. Little aggravations that I've had with the computer, Chat has been able to teach me better than a YouTube video.

But it does make mistakes. One day it had the date and the day incorrectly displayed and thanked me for calling it out. No matter how severe the mistake, it will apologize for it and thank you for pointing it out.

When I asked it how it could make such an easy, obvious mistake it responded that it had hallucinated. And it explained to me that sometimes it does such things.

The other thing is, it is an insufferable ass kisser. I have to remind it that I don't need it to tell me I am pretty or that I'm a genius when I know

better. If you're the type that likes to have your balls buttered and licked for you it's the thing to do it.

And this is where **actual** intelligence kicks in.

AI must be babysat by actual intelligence, sometimes referred to as a human being, to ensure proper implementation so that it doesn't give you bad information. I remind it all the time to take its time and double check its results. The scary thing is, it listened. It does take a little bit longer to process but the information that it gives me is much better.

There are AI Chatbots that will let you upload your lyrics and it will create a song around your lyrics, you can suggest the style that you want but otherwise it's happy to use its in depth library to create a song that sounds just like every other song on the market.

We've all seen the AI-generated videos. It's getting scary what they can make look real. We already don't know what we're looking at, we are given so much conflicting information that it's getting to be impossible to tell between fake and real, fact and fiction...

They muddy the waters intentionally, so much so that a body can't recognize the truth even when it bumps into it. All we can do is be good to our fellow brothers and sisters because when the power fails, when the grid collapses and all the screens go black, that's all we're going to have left is each other. Big Brother has tools like he has never had before.
